PROSPECTUS

A BUILDING for Applied Science, to cost one hundred thousand dollars, has been offered by Mr. Andrew Carnegie.

¶ An endowment of one hundred thousand dollars must be provided to meet this.

¶ If the Alumni of the University of Rochester residing outside of the City of Rochester contribute or secure the contribution of fifty thousand dollars, the remaining fifty thousand dollars, it is assured, will be forthcoming from that city.

¶ A course in Applied Science has been arranged and partially put in effect at Rochester. This course has been accorded an enthusiastic reception and received great praise from students and patrons of the institution, while those engaged in the management of important enterprises, have been quick to appreciate the worth of young men who have enjoyed its advantages. It is confidently expected that technical training, combined with a sound historical, commercial, business and politico-economic knowledge, will prove of the highest advantage to graduates, and will enable them to advance rapidly to positions of importance in the world of commerce and material progress.

¶ A systematic application of trained and specialized intellectual power to the control of physical forces and of business undertakings may be named as an important distinction of the times, and Rochester may well be in the van.

¶ At the present time upwards of fourteen thousand dollars have been subscribed by the New York Alumni. Pledges of further subscriptions are earnestly solicited by the

COMMITTEE IN CHARGE

HENRY M. BRIGHAM, 37 Liberty Street
ROSCOE C. E. BROWN, 154 Nassau Street
GRANT HUGH BROWNE, care Morton Trust Co.,
